

### IN THE CLAIMS:

Please amend the following claims:

1. (Amended) A fire smoke cleansing device for personal use and comprising a particle filter, carbon monoxide filter and a filter for acidic gases, ~~[characterized in that]~~ wherein it comprises a rectangular oblong house [(1)], which in one end comprises a number of inlet openings [(3)] arranged over an end surface [(2)] for a gaseous medium, in connection to the inlet openings [(3)] a filter space [(5)] is arranged containing in the order given from the inlet openings a) a particle filter [(21)], b) a catalyst [(22)] for the oxidation of carbon monoxide to carbon dioxide to eliminate carbon monoxide present in said gaseous medium, and c) a filter mass [(23)] for elimination of acidic gases, in connection to the filter space [(5)] a valve chamber [(6)] is arranged comprising two one-way valves [(9, 13)] to provide a controlled flow of gas through said filter space and a bite mouth piece [(11)] arranged to the valve chamber [(6)] at the opposite end [(10)] of the house for providing ventilation.
2. (Amended) A fire smoke cleansing device according to claim 1, wherein the valve space [(5)] comprises an opening [(8)] provided with a first one-way valve [(9)] arranged to the filter space, whereby this first one-way valve controls the transport of gas from the inlet openings to the bite mouth piece [(11)], and an outlet opening [(12)] having a second one-way valve [(13)] for outgoing respiration air, whereby said second one-way valve prevents respiration through the outlet opening.
3. (Amended) A fire smoke cleansing device according to claim 1 ~~or 2~~, wherein a distribution space is arranged between the inlet opening of the house.

4. (Amended) A fire smoke cleansing device according to claim 1, wherein the catalyst for the oxidation of carbon monoxide is a mixed valence oxide.
5. (Amended) A fire smoke cleansing device according to claim 4, wherein the catalyst is a copper oxide/manganese oxide.
6. (Amended) A fire smoke cleansing device according to [~~claims 1-5~~] claim 1, wherein a sound producing means is connected to the valve chamber and is arranged to provide a sound at exhaustion through the valve chamber.
7. (Amended) A fire smoke cleansing device according to [~~one or more of claims 1-6~~] claim 1, wherein the house is provided with a fluorescent dye.
8. (Amended) A tightly closing package containing a fire smoke cleansing device according to [~~one or more of claims 1-7~~] claim 1, as well as moreover further protection equipment to fire smoke influence.
9. (Amended) A package according to claim 8, wherein it further contains a drying agent.
